WINDOWS & DOORS

BY KP BUILDING PRODUCTS

Care and Maintenance

The surfaces of the GreenView Windows products will over time collect a layer of surface dust. Normal dusting with a damp cloth will remove this accumulation of surface dust. If you wish to do more thorough cleaning of the products, the following procedures should be followed.

Vinyl: A mild solution of liquid cleaners such as dishwashing detergent may be used. For stubborn stains, a cleaner such as Fantastic or VIM may be used. Do not use harsh abrasives on vinyl.

Weather stripping: Weatherstripping may become worn over the life of the window, and should, if necessary, be replaced. Loose or worn weatherstripping is one of the prime reasons for the heat loss and air filtration in windows. Weatherstripping may be purchased at any window company selling replacement parts.

TO REMOVE SCRATCHES

To remove any scratches from our PVC windows, follow the steps below:

- Fill a bucket with water and add some liquid dish soap to it.
- Wet the scratched area.
- Using a wet piece of 600 grit wet/dry sand paper, lightly sand the scratched area in a circular motion until the scratch starts to fade away.
- Then wet a 1200 grit wet/dry sand paper and sand the surface in a circular motion. * The sand paper needs to be very wet at all times to remove any swirls.
- Rinse the vinyl and then apply a spray car wax on a rag and rub the vinyl surface to bring back any amount of lost shine.
